

**HEALTH^e
PARADIGM**
Endorsed by the Medical Association of Georgia

HealthParadigm connects disparate electronic health records (EHRs) in near real-time to provide members of the health care team with the most current and complete patient information. As a connected ACO/CIN, your organization will have access to tools that support effective care coordination, reduce duplicative services, and improve patient safety.

**CONNECT.
ANALYZE.
ENGAGE.
TRANSFORM.**

HealthParadigm provides ACOs/CINs access to longitudinal clinical records of all attributed patients at the point of care as well as the ability to work with robust clinical data analytic reports based upon aggregated data from the exchange.

HealthParadigm provides your ACO/CIN with:

- Bidirectional EHR interfaces which automatically access the HealthParadigm to bring important medical information on attributed patients directly into the patient's chart.
- Timely access to patients' more complete health care history to include medications, physician notes and reports, recent diagnosis, lab results, allergies, and recent procedures and results.
- Web-based provider portal for facilities without an EHR such as long term care facilities or home health agencies participating in the ACO/CIN.
- DIRECT messaging to securely share important health information with other ACO/CIN physicians and patients.
